

PURPOSE

FOREST PLAN REVISION GEOGRAPHIC & MANAGEMENT AREAS

Updated 6/25/2017

Ferron/Price and Sanpete Ranger Districts

Geographic and Management Areas are used to identify areas within the Forest where management direction will differ from general Forest Wide plan direction.

Not every acre of the plan acre needs to be assigned to a management or geographic area.

Every plan must have management areas or geographic areas or both. The plan may identify designated or recommended designated areas as management or geographic areas (36 CFR 219.7(d)).

DEFINITIONS

Management Areas

A management area is an area identified within the planning area that has the same set of applicable plan components. A management area does not have to be spatially contiguous. The typical management area represents the management emphasis on a landscape basis.

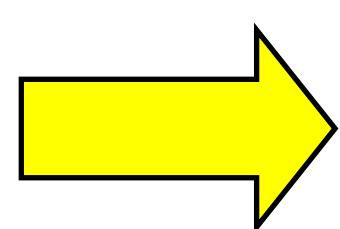

Geographic Areas

A geographic area is a spatially contiguous land area identified within the planning area. The typical geographic area represents large areas that have desired conditions with a range of possible resource management emphasis.

PUBLIC INVOLVEMENT

During the Fall 2018 Review Period the Forest is seeking feedback on

- Proposed Management and Geographic Areas

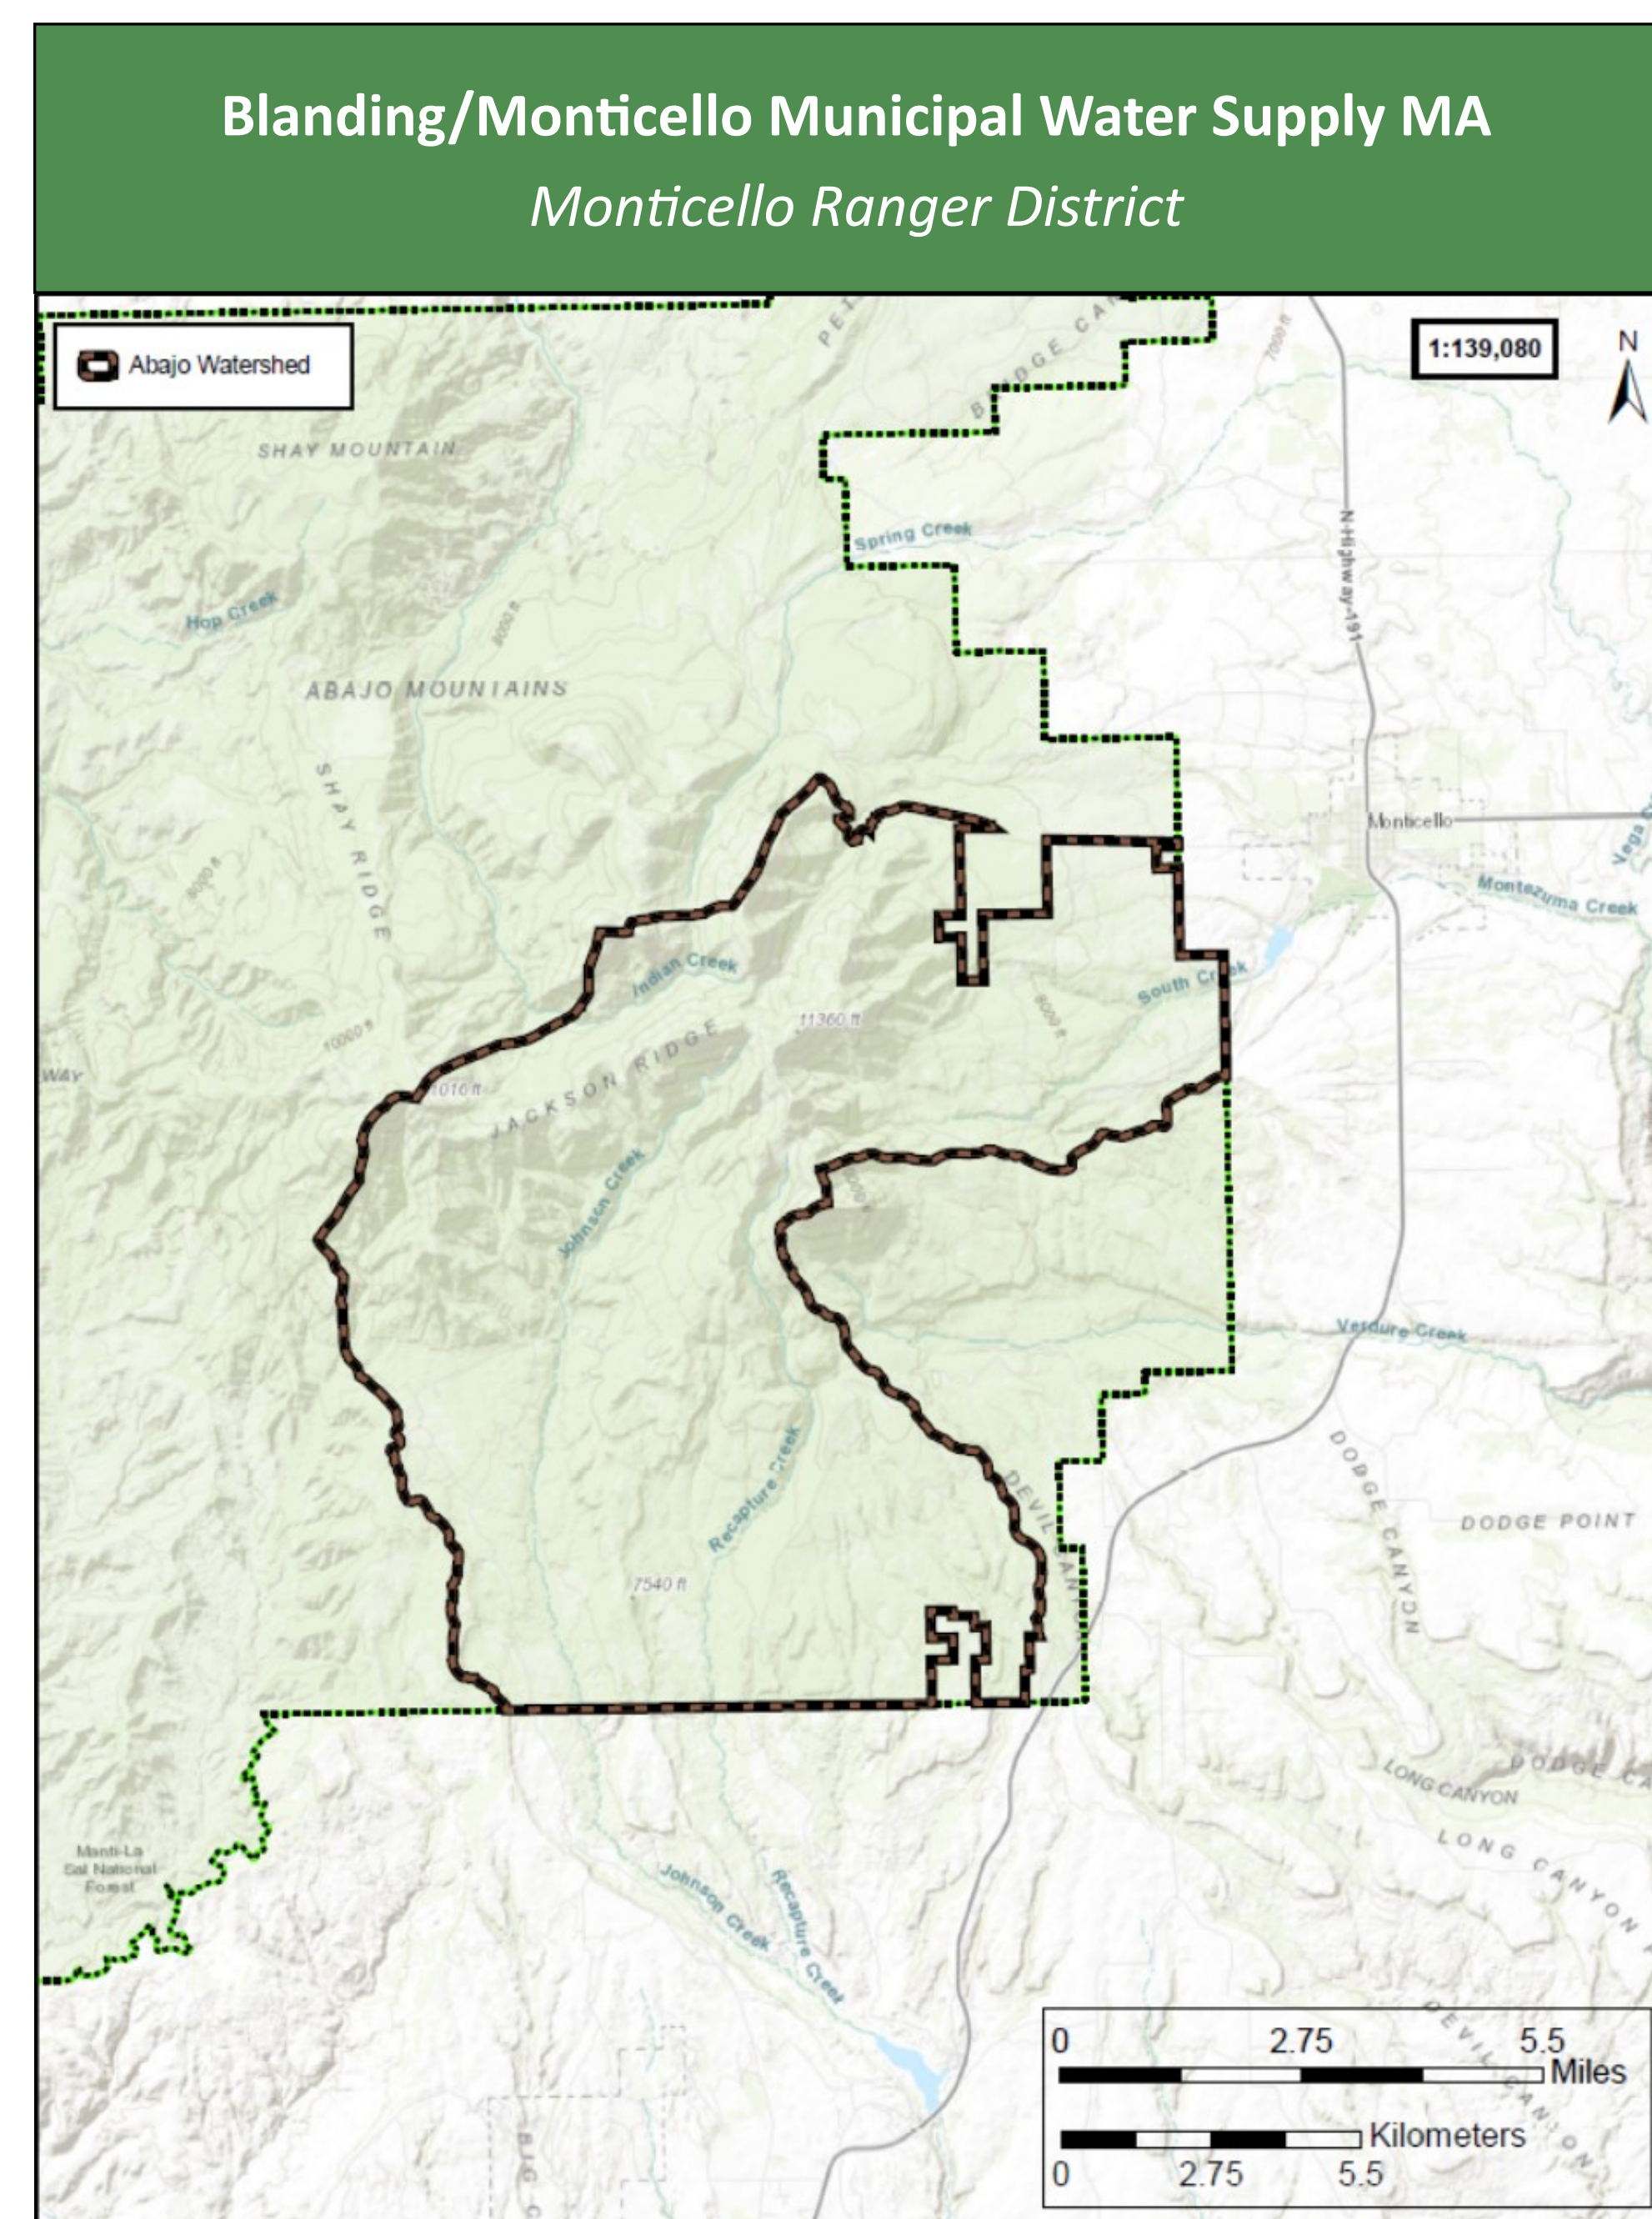

Complete a Comment Form during the Open House or send your comments to the Forest by **November 9, 2018**.

To submit comments you can send comment forms to the Plan Revision Team at mlnplanrevision@fs.fed.us; or postal mail at 599 West Price River Drive, Price, Utah 84501.

To view draft documents visit the “[Fall 2018 Review Period](https://www.fs.usda.gov/main/mantilasal/landmanagement/planning)” page on our website
